

ERAGE

DUAL-BACKED RATCHET TOKEN · BASE NETWORK · ERAGE.App

v2.0

THE IDEA

ERAGE is a dual-backed ratchet token on Base. Mint ERAGE by depositing equal amounts of Eshare and Rage. Every mint and redeem carries a **2.2% tax** — Backing ratio only goes up! No staking. Just HODL. Simply holding ERAGE means your position becomes worth proportionally more backing with every single transaction.

HOW THE 2.2% TAX IS SPLIT

Component	Rate	What it does
Fixed Backing	0.13%	Guaranteed floor growth every transaction, forever
Linear Backing	0.69%	Primary ratio growth engine; compounds as TVL scales
Eshare Burn	0.69%	Deflationary pressure on Eshare supply
Rage Burn	0.69%	Deflationary pressure on Rage supply
Total	2.20%	Same rate on every mint and redeem

WHY THE RATIO CAN ONLY GO UP

On every mint and redeem, the contract retains more backing per ERAGE — so the ratio rises. At launch, 1 ERAGE = 1 Eshare + 1 Rage. After sustained activity, that same 1 ERAGE might command 1.5 Eshare + 1.5 Rage — not from inflation, but from the 'only go up' ratchet mechanics.

HOW TO GET IN

With ETH — Zapper swaps half into Eshare and half into Rage, then mints ERAGE in one click with a 0.69% convenience fee to support protocol operations.

With Eshare + Rage directly — Deposit equal amounts, receive ERAGE instantly.

Buying on Uniswap — ERAGE trades on Uniswap V3 (ERAGE-ETH pool). The dApp Price Efficiency chart shows the cheaper option in real time — arbitrageurs take advantage of premiums, and every arbitrage trade pushes the ratio higher for all holders.

SAFETY

Slippage protection — Auto-Slippage (adjustable up to 15%), blocking sandwich attacks and front-runners.

48-hour timelocked emergency drain — Emits a public on-chain event instantly. Holders get a full 48-hour window to redeem at current value before execution.

ARBITRAGE OPPORTUNITIES

Price below backing — Buy ERAGE cheaply on Uniswap, redeem through the contract for full backing value. Capture the spread.

Price above backing — Mint fresh ERAGE at contract value, sell on Uniswap. Capture the Premium.

Price neutral — Mint and hold. The ratchet never stops — number go up.

THE BACKING TOKENS

Eshare — A deflationary ecosystem token shared between EMP Fusion, Plazm.io, and other communities on Base.

Rage — A deflationary derivative token within the UltraRoundMoney.com ecosystem on Base.

Both are independent assets that exist outside ERAGE. ERAGE does not guarantee the future price of either — it guarantees that whatever they are worth, each ERAGE will command proportionally more of them over time.

Deployed on Base · OpenZeppelin-audited primitives (ERC20, Ownable, Pausable, ReentrancyGuard, SafeERC20)

Agent audits performed by Claude Opus 4.7, GLM 5.1, and Gemini 3 · Additional audits in progress

ERAGE.App · Nothing in this document constitutes financial advice — DeFi is experimental and carries real risk of loss. DYOR.
